

Electricity sharing and energy community rules

DEVELOPMENT OF THE LEGAL FRAMEWORK

MINISTRY OF CLIMATE AND ENERGY

RIGA | 24.05.2024.

Sharing electricity

the transfer of electricity produced and transferred to the system by the active customer to other final customers, including active customers, or to the members or shareholders of the electricity energy community produced and transferred to the system by the electricity energy community;

TYPES OF COMMUNITIES COVERED BY THE REGULATIONS

Electricity energy communities

- Renewable energy communities

- Active customers of energy from renewable sources acting jointly

ELECTRICITY SHARING CONDITIONS

The energy community shall share electricity only in those objects which are registered in the register of the BVKB

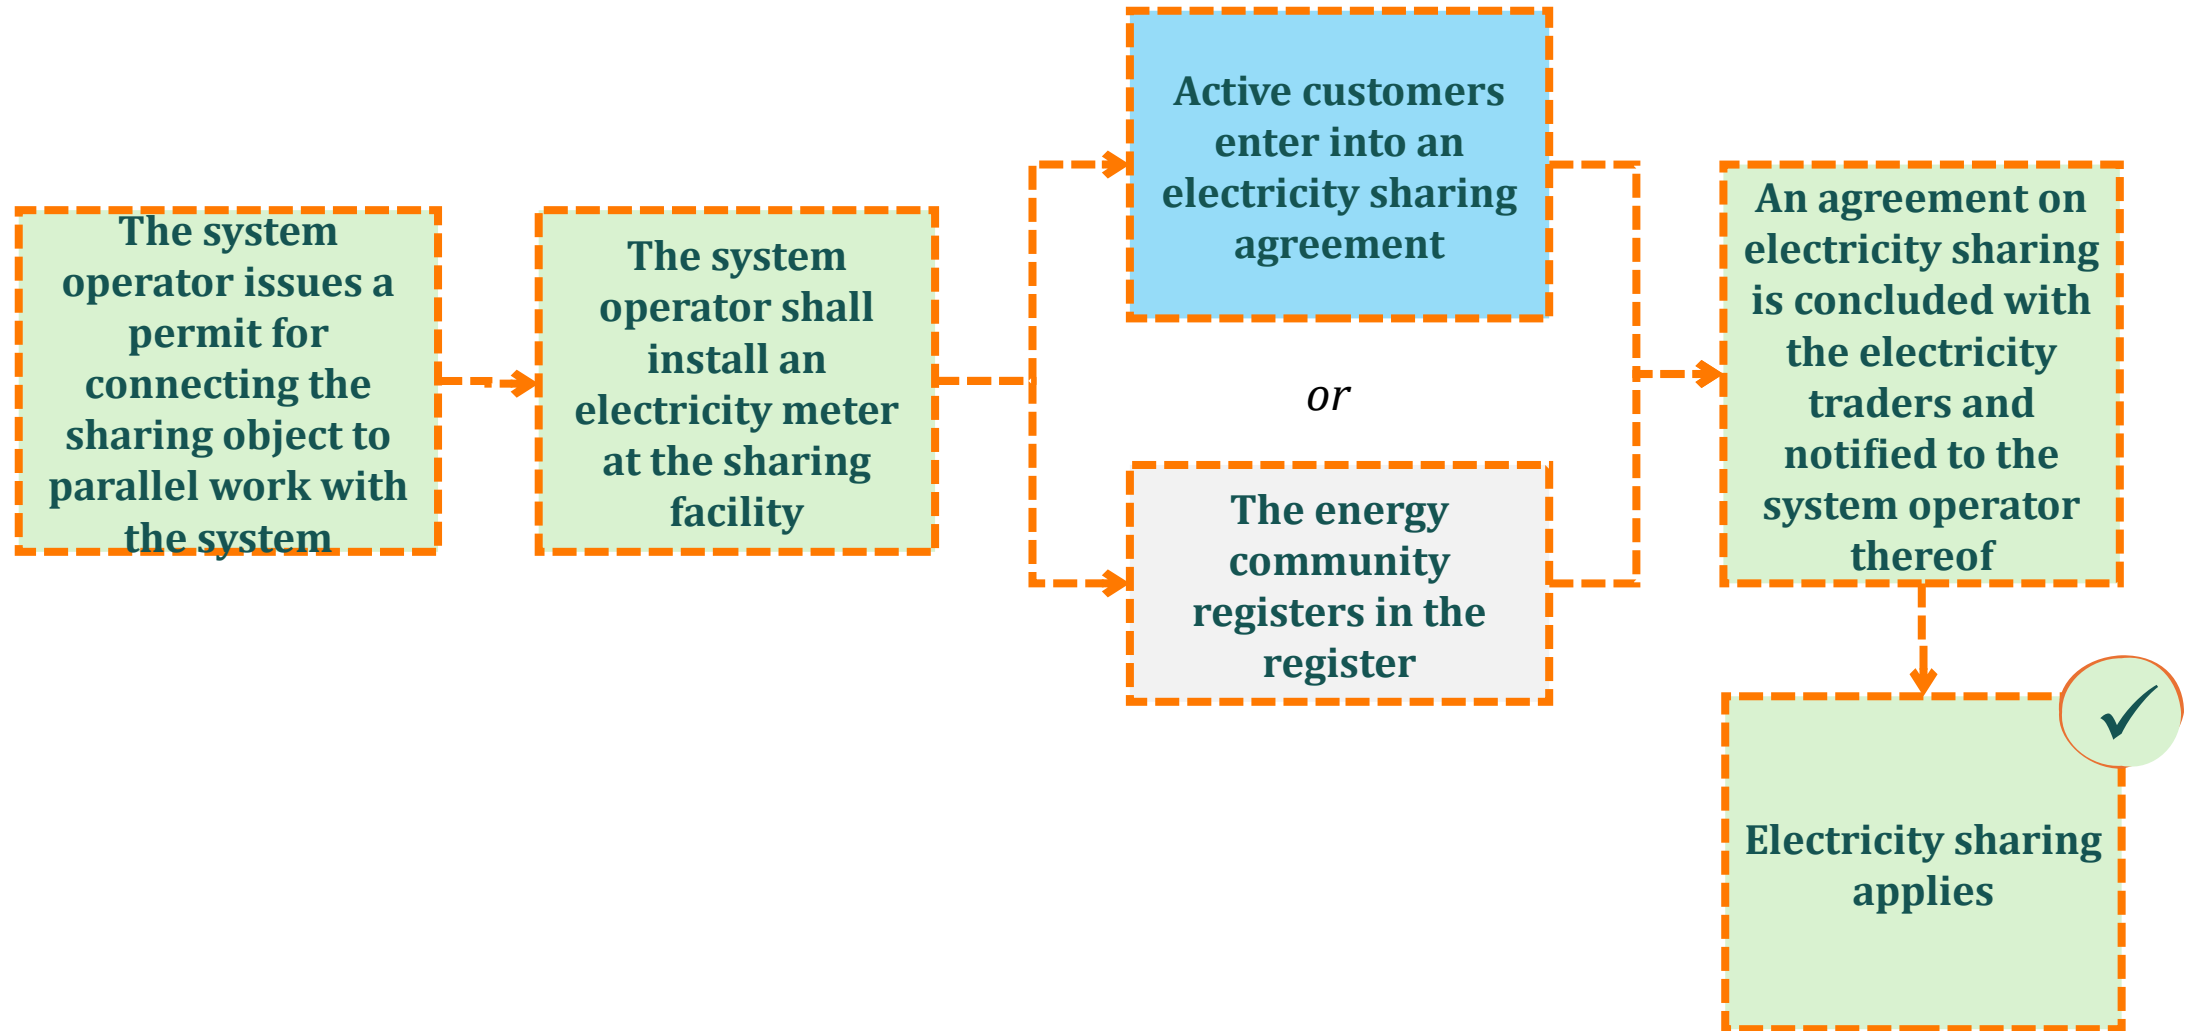

The sharing of electricity by active customers shall be carried out only in those objects for which an agreement has been concluded between the members of the community of active customers

The principle of self-consumption

ELECTRICITY SHARING ARRANGEMENTS

● ADDITIONAL REQUIREMENTS INCLUDED IN THE TERMS

- Arrangements for the exchange of information and relations between market participants and system operators
- Procedure for registration of energy communities and information to be provided in annual reports
- Information to be included in the contracts between the Community and power traders
- Minimum requirements for defining the purpose of Community action and statutes

OPEN QUESTIONS IN THE FUTURE IN RELATION TO SUGGESTIONS IN MARKET DESIGN PROPOSALS

- ▶ Possibility of participation of large electricity consumers – 15 MW
- ▶ Contractual relations with several system operators
- ▶ The issue of accounting and network ownership of apartment buildings
- ▶ Right to participate in the provision of flexibility and other services
